LAB ASSIGNMENT-8

FACULTY: ASISH KUMAR DALAI

1. Create the files assignment8.php and regno.css.
2. The output of assignbment8.php must be as below

3. Create a database db_vit_regno. Under this database create a table named regno_users with following columns: uname, password, email, dob. All the columns with not null constraint and uname as the primary key.
4. On clicking the sign-up button check for the following validations
   a. All the fields must not be empty.
   b. Password and confirm password field must match.
5. If all the validations are passed, insert the data into the regno_users table. Redirect the user to redirect the user to regno_success.php and display a message DATA INSERTED SUCCESSFULLY.
6. Before entering the data into the table make sure that the uname value entered by the user is unique, i.e. record with the same uname must not be already present in the table. If such uname already exist display the error message CHOOSE A DIFFERENT USER NAME otherwise insert the data.
